FATHER M. M. MEARA DIED SUDDENLY

SERVED 18 YEARS AS PASTOR OF ST. JOSEPH'S IN THIS CITY

Celebrated Golden Jubilee in Columbus Last Year—Silver Anniversary in This City in 1899—Death Was a Shock to His Many Friends Here.

The sudden death of Rev. Father M. M. Meara Saturday morning at 9:30 o'clock at the cathedral rectory, 212 East Broad street, Columbus, was a shock to the members of St. Joseph's church and his many personal friends in this city who had learned to love the pastor for his many splendid qualities of mind and heart.

Father Meara was appointed pastor in charge of St. Joseph's parish on April 20, 1882 and left here November 6, 1900, having been assigned to St. Joseph's cathedral in Columbus.

In a personal tribute Rev. Father James M. Kirwin, of Galvenston, Texas a native of this city, who in his boyhood had served Father Meara as an acolyte, says; "In April, 1882, Father Meara was appointed to St. Joseph's church Circleville. In the full vigor of priestly zeal, his charming personality and manly character soon won the hearts of all.

"He saw at once the necessity of a parochial school and determined to build it. At the call of both the old and young men of the parish, but particularly the Young Ladies' Sodality, set themselves to the task. The school was completed, paid for and opened in 1886. The Sisters of Charity of Nazareth came to teach. No body of women ever changed so completely the hopes and ideals of growing youth.

"Father Meara was a fine devoted pastor. No night was too bad to answer the country sick call. His impress on St. Joseph's school will linger forever with those who were blessed to know his tender solicitious care. His fine aspirations for all, his determined correction of the lazy, the arousing of the indifferent, and the conquering of the incorrigible, stand out in memory. He lived for his school and the love even unto death, of all of its students, for him grew and flashed keener and clearer.

In his household a gentle, tender mother presided and with her were three daughters. The mother died in this city. Miss Josephine died in Columbus at the home of her brother. Miss Mame married Samuel Hutchins who died only a few weeks ago. Mrs. Hutchins has also passed to her reward; Nellie, who married James F. Fitzpatrick is the only living member of the family.

During Father Meara's pastorate the present St. Joseph's cemetery covering an area of twenty acres were acquired improved and laid out in lots.

Few priests live to celebrate their golden jubilee, but this honor was permitted Father Meara in May of last year and the tribute to his fifty years as a priest was given by Rev. Father James M. Kirwin, of Galveston, Texas.

While pastor here in 1889 St. Joseph's congregation fittingly celebrated his silver jubilee in the new school hall and this was attended by the bishop and many priests of the diocese.

Speaking of him, Bishop Hartley said:

"The cathedral as it stands is a monument to his priestly zeal and love for the beauty of God's house. The school, with every facility and convenience for the children, showed how deeply his heart was interested in the education of the young.

"He was a kind friend and prudent adviser to all who came to him with their troubles. Always an exemplary priest, no cathedral parish in the United States had a more devoted pastor, none where the spiritual and temporal affairs were better cared for all looked after. We all will miss him and never fail to remember most kindly all the good he has done in our midst."

Rev. Father Meara was born in Cincinnati, October 20, 1850. Shortly after the family moved to Columbus and he attended St. Patrick's parochial school, in 1866, he entered St. Mary's Catholic seminary at Cincinnati. With the opening, September, 1871, of St. Aloysius seminary in Franklin, west of Columbus, Rev. Father Meara entered there continuing until his ordination, May 20, 1874.

He was assigned to St. Joseph's cathedral Columbus, but because of a threatened attack of tuberculosis in December, 1878, he went to Santa Fe for six months to recover his health. In April, 1882 he was appointed to St. Joseph's church at Circleville.

April 17, 1899, Rev. Father Meara was called to Columbus as pastor of the cathedral.

When Father Meara was assigned as pastor at the St. Joseph's cathedral in Columbus the parish was heavily in debt. Thru his fine business ability and management, this debt was raised and in twenty years the parish was not only out of debt but had raised over $300,000 to pay for improvements. He removed the reproach that the cathedral congregation had no school he purchased the Kelly residence adjacent to the cathedral and made improvements, which together with the building, cost $50,000, and in addition only recently within the past year placed one of the finest organs in the west in the cathedral at a cost of $35,000.

Funeral services will be held at St. Joseph's cathedral Thursday morning at 9 o'clock. All the priests of the diocese will be present to recite the office of the dead and assist at the solemn pontifical requiem mass which will be sung by Bishop James J. Hartley. The body may be viewed at the parish house until Wednesday when it will be moved to the cathedral to be viewed by the public. Burial in St. Joseph's cemetery, Columbus.

COMBATS BLACKMAIL

Mrs. Louise Wise Lewis, heiress to the $60,000,000 fortune of the late Henry M. Flagler, who has enlisted the aid of friends, detectives and attorneys in her attempt to combat the apparent blackmail attempt against herself and her young husband, Lawrence Lewis. The leading character is a governess who used to work for her, who was recently arrested in a southern city with diamonds, money and letters which it was said had been stolen from Mrs. Lewis.

Sick Children of Aurora Study in Open Air

This is not a schoolroom in the Arctic, with juvenile Eskimos as pupils. It is simply the system of "fresh air education" as demonstrated in the Brady public school at Aurora, Ill. By this method boys and girls who are found to be underweight or undernourished, or have other physical defects which fresh air treatment may overcome, are segregated, and by studying, eating and sleeping in rooms where the windows are always open, even during extreme temperature, regain weight and health without resorting to medicine. Each child drinks three and a half pints of milk a day, and hot dishes are served for luncheon, with a menu of carefully selected nourishing food. The average gain in weight is two to three pounds per week.

MRS. BATEMAN

Died in Columbus—Funeral and Burial at Obetz.

Mrs. Sarah Ellen Bateman aged 71, wife of Oliver Bateman, died at her home, 171 Innis avenue, Columbus, Wednesday from carcinoma. Besides her husband ,three daughters, Mrs. C. E. Wickliffe and Mrs. Oscar Jenkins, of Columbus and Mrs. J. E. Dorn, of Toledo; two sons, C. E. and D. A. Bateman of Columbus; eight grandchildren and a great-grandchild survive. Funeral services were held Sunday. Interment was made at Obetz cemetery.

Mrs. Bateman formerly resided at Kingston. She was an aunt of Mrs. Lillian Himrod of this city, and she attended the funeral.

HAPPENINGS IN OUR STATE

(United Press)

OHIO HAPPENINGS

Barberton, O., Jan. 24: —Shooting himself twice in the mouth Rabbi Jacob Robinovitz, 53, head of the local synagog, killed himself at his home here last night.

—o—

Columbus, Jan. 26—Railroads are giving special rates to persons attending Farmers' Week exercises here February 1 to 7. About 5,000 farmers are expected to attend.

—o—

Zanesville, Jan. 26—Thomas Wooley 62, father of eight children hanged himself here. He was despondent over unemployment.

—o—

Athens, Jan. 26:—Everybody in Athens wants all the Ohio university students to pass their examinations so this week has been declared "quiet week" thruout the town.

—o—

Columbus, Jan. 26—It was reported today that R. W. Archer, of Cleveland, will be appointed to the state civil service commission to succeed W. E. Pundy, whose term has expired. Archer served three terms as state treasurer. Hs is a Republican.

Miss Mercedea Mason, of Columbus, spent the weekend with her parents, Mr. and Mrs. W. H. Mason, of North Court street.

RIPE OLD AGE REACHED FOUR SCORE YEARS

Mrs. Mary Davis Passed Away at Home in Five Points--Funeral Monday.

Mrs. Mary Davis, aged 81, died at her home at Five Points Saturday morning at 6:10 o'clock. Her death was due to complications and she had been ill one year.

The deceased was born in this county July 16, 1843, and she was twice married. Her first husband was Samuel Alkire and her second was Charles Davis. Both are dead. Two sons, Shelton and Thomas Alkire of Five Points, and two grandchildren and five great-grandchildren survive.

Of her immediate family one brother Samuel Davis, of Washington C. H., and one sister, Mrs. Harriet McGrath of Springfield are living.

The funeral services were held at the Christian church Monday afternoon at two o'clock. Rev. C. R. Vaughn officiated. Interment was in Pleasant cemetery near Mt. Sterling.

LEAKING GAS KILLED FOUR COLUMBUS MEN.

Columbus, O., Jan. 26 —(United Press)—Four men killed by leaking gas in excavation of new A. I. U. building sixty feet below the street level. Jack McCarthy lost his life in an heroic attempt to haul bodies out on derrick.

BUILDING CHANGES HANDS.

Howard D. Fairley and Erma M. Fairley, of this city, have sold the building occupied by the Circleville Hardware store to Walter W. Grinn, Sarah A. Sharr and James C. Breyfogle of Columbus. The Circleville Hardware cofpany retains the stock leases the building and will continue business in the present location.

AMBULANCE SERVICE.

Mrs. Ida McCorkle was rushed to Mt. Carmel hospital Columbus, Saturday night in the Mader & Ebert ambulance suffering from an attack of appendicitis. Her condition is serious. At noon today no operation had as yet been performed.

FORMER RESIDENT

Miss Gertrude Bryant Died Suddenly in Columbus.

Miss Gertrude Bryant, a former resident of this city died suddenly at her home, 40 South Fourth street, Columbus. She was found dead in her room Saturday afternoon.

The deceased was a daughter of William and Harriet Todd Bryant and she was born in this city 75 years ago. She was a cousin of William Todd, of 163 Walnut street.

Miss Bryant formerly lived on North Court street and she moved to Columbus three years ago. Her remains will be brought to this city for burial.

ANTON FLETTNER

Anton Flettner is the inventor of ships without masts or sails. It is reported that all the Hamburg-American line steamers are to be fitted with this new invention. Airplanes are also to be constructed with wings on the new principle. In place of sails or masts, the ships are fitted with two metal cylinders which turn in the wind 100 times a minute, generating electricity serving a motor which drives a screw.

CHARLES BARTHOLOMEW DEAD.

The funeral services of Charles Bartholomew, who died last Thursday in Columbus, were held Sunday afternoon at two o'clock at the Maeder mortuary in Columbus,, corner Third and Fulton streets. The deceased is survived by his wife and three daughters, also two brothers and a sister. Interment was made at Reber Hill cemetery.

FORD COUPE AND TRUCK IN A COLLISION

Hay Scattered Over Street—Occupants of Car Escaped Without Injury.

The Ford coupe of Stanley Evans, of Crestline, struck a truck loaded with baled hay owned by Ralph McCoy. The truck was driven by Nelson Hough. Nearly every bale of hay was thrown off in the collision which occurred at the intersection of Court and Main streets. The Ford coupe hood lamps and fenders were stoved in and bent, but the hay truck was not damaged preceptibly.

Mr. Evans was accompanied by his wife and children, Geraldine Geneva and Robert Louis, and his aunt, Mrs. Sarah Jones, of Columbus. They were on their way to Oak Hill to attend the funeral of two cousins, Mrs. Joseph Evans and Mrs. Reese Evans.

FUNERAL OF PAUL DRESBACH.

The funeral services of the late Paul Dresbach will be held at the home of his parents, Mr. and Mrs. Emanuel Dresbach, 226 Watt street, Tuesday afternoon at two o'clock. Rev. G. J. Troutman, of Trinity Lutheran church, will officiate. The pall bearers will be Howard Dresbach, Philip Weimer, Claude Kraft, Leland Pontius, Floyd Roseboom and Arnold Reichelderfer. Interment in Forest cemetery.

FOREIGN PARASITES HELP AGRICULTURE

Progress Reported in Warfare on Insects.

Washington. — Substantial progress in warfare against a variety of insect pests is described by the bureau of entomology in its annual report for the fiscal year 1924. A number of effective new methods and materials for use against different types of infestation have been developed, and the control of insect pests by the importation and rearing of natural parasites has received considerable attention.

Work designed to prevent the spread of the Japanese beetle has been greatly strengthened, it is said, by increased appropriations. More effective inspection of farm products and nursery stock has been made possible, as well as the broadening research activities. These have resulted in information which may lead to the better utilization of evergreen stock grown in the infested regions of New Jersey and Pennsylvania, in the development of better insectides and methods of applying them, and in new measures for treating infested soil in nursery beds.

Every effort has been made to secure the maximum number of parasite enemies of the Japanese beetle, and to establish these successfully. In co-operation with the states of New Jersey and Pennsylvania and the federal horticultural board, the prevention of the spread of the Japanese beetle has been enforced to the fullest extent possible by means of a rigid embargo on a very large class of produce likely to be moved out of the infested areas.

Corn Borer Expands.

The European corn borer has made its appearance on the western end of Long Island, and the infestation in the Ohio area at the western end of Lake Erie has intensified. Progress has been made in the work of importing insect parasites of the corn borer from southern Europe. General control campaigns have been instituted.

One imported parasite is aiding in the control of the alfalfa weevil. Vigorous control efforts by state and federal entomologists are believed to have contributed importantly to the suppression of grasshopper outbreaks in the Dakotas, Montana, Colorado, Wyoming, Texas and Oklahoma. Extensive investigations have been made in connection with weevils attacking stored products of all kinds, resulting in the recommendation of several better and safer methods of fumigation.

The Mexican bean beetle has continued its rapid spread. It has now almost reached Lake Erie, has been found in West Virginia near Pennsylvania, and has extended its range greatly in the Southeastern states. Attempts to establish a tachinid fly parasite have thus far been unsuccessful, but it is hoped that this can be done eventually.

Extreme cold weather in January, 1924, and a phenomenal drought later, in the states from Alabama westward, resulted in a low emergence of the cotton boll weevil this year. Control measures have been perfected along several lines, including airplane dusting and the maintenance of a supply of calcium arsenate, and the outlook is encouraging.

Bark-beetle control projects in the Pacific coast states and the Rocky mountain region have continued to require much attention.

New Contact Insecticide.

A new contact insecticide, which will in many instances be a suitable substitute for nicotine at a lower cost, has been developed at the Silver Spring (Md.) laboratory. The practical value of pure ethyl acetate as a fumigant for grain at railway terminals has been demonstrated. The substitution of hydrocyanic-acid gas fumigation for sprays and other treatment of hides and skins for the control of the hide beetle has been a complete success. A new formula under investigation at the Orlando (Fla.) station, the so-called kaolin emulsion, has proved to have distinct merit in the control of scale insects affecting citrus fruit trees. A project is under way, involving co-operation with the bureau of public roads and the bureau of standards, to learn the effect of the electrical charging of particles of insecticide dust produced by the airplane used in airplane dusting of cotton fields.

Studies relating to the problems of bee-keeping, such as the diseases of bees, the causes of differences in the colors of honeys and the behavior of bees, as affected by change in meteorological and other factors, have continued at the bee laboratory at Somerset, Md.

In recognition of the position filled by the insect pest survey, the entomologist in charge of the survey has been requested to participate in the meetings of the crop estimate board, to serve that board in an advisory capacity on the status of insect pests affecting crops upon which this board issues estimates.

Keeps Diary

Emporia, Kan.—Persons who buy diaries the first of each year, keep them a few weeks, then tire of the practice, will take off their hats to W. H. Brooks, Emporia grocer. He has kept a diary for 59 years without missing a day, and January 1 he started his sixtieth journal.

Brooks only writes a few lines a day, but he never lets a day go by without some sort of an entry. He keeps his diaries filed in his desk at the store, and always has ... able for looking up events in the town's history.

U. S. TO KEEP EYE ON FUR SUPPLY

Some of the Valuable Fur-Bearing Animals Almost Killed Off.

Washington.—A new division of fur resources was established in the Department of Agriculture recently. This means that the government is going to take a special interest in conserving the country's fur supply.

Some of the valuable fur-bearing animals of the United States have been almost entirely killed off or driven far back into the wilderness as civilization turned swamps and forests into farms and towns. Yet the industry is growing, because more people than ever before are wearing furs. Fur has become an everyday staple commodity, in demand not only for warmth but for trimming and decorative purposes.

More extensive use of fur has been made possible, in the face of a dwindling natural supply, by the changes in the kind of furs worn. Once the market was most keenly interested in rare and precious pelts. A trapper would hunt for an entire winter in the wilderness country and think the time well spent if he came back with a single silver fox. If it was a fine pelt his catch would bring from $1,000 to $5,000. If he could get a well-matched pair of silver foxes he was assured of around $10,000.

The sort of adventurous hunting for rare skins still goes on, but the fur market does the profitable bulk of its business in muskrat, skunk, the less valuable foxes, raccoon, squirrel and other moderately priced and plentiful furs.

These small native fur bearers represent a great source of national wealth. Furs trapped and produced on farms in a single state like New York are valued at several million dollars a year.

The difficulty is that most of the states are not protecting their fur resources so as to get the most out of them in the long run. In many states, laws do not protect certain fur bearers at all. The muskrat, for instance, which is the most valuable fur producer in the United States, is not protected in 11 states. Most of the state trapping laws are defective in that they do not protect the animals over a sufficient period of the year. And in some cases the laws are not rigidly enforced.

There are no general statistics showing how rapidly the fur bearers are being killed off. There are no figures showing exactly how many animals are being killed off. There are no figures showing exactly how many animals are taken in the breeding season or in warm weather when their fur is poor in quality—though the government's estimate is that from 45 to 55 per cent of the pelts put on the raw fur market are taken when the fur is almost valueless.

Experts in the Department of Agriculture have for the last 12 years been experimenting with fur problems and urging protective legislation. The new division is pushing the work ahead. It is trying to demonstrate the advantages of limiting the fur hunting season to a very few months of winter and very early spring, when hunting is really profitable. Short seasons for most of the fur animals are economical in every way, as the fur industry itself realizes.

Fur Bearers Are Assets.

Every one realizes that farmers should be permitted to destroy troublesome predatory animals and that when a species becomes too numerous the restrictions on killing should be lessened. Mostly, however, the need is for greater protection for these animals. Many of the small fur animals have reputations for destroying crops and doing other damage, whereas they are really economic assets, because they prey on pests considered more destructive than themselves.

When a valuable fur bearer becomes rare in a section, the fur division advocates that trapping be entirely prohibited for several years, so that the species may re-establish itself.

Perhaps the most interesting work done by the division is in connection with the breeding of fur animals. For some years the government experts have been experimenting with fur-farming methods but they say that comparatively little is yet known regarding the habits and the handling of fur bearers in captivity.

The breeding of foxes is very well understood, and of all the animals raised for fur the fox has so far most generously repaid the breeders. Almost sixty years ago, Canadians had the idea of breeding silver foxes. The silver fox, which was then so much sought and so valuable, was a color phase of the red fox, a black animal with silver hairs intermixed and with a white tip to the tail. About 1887 successful results were reported. Some breeders succeeded in producing silver foxes by mating red with silver. Other men started with a pair of silver foxes. The main trouble experienced by the pioneers in the business was that the habits of the wild foxes were unknown. In many cases, fine, valuable young silver pups were ruthlessly killed by old foxes, through the ignorance of the men who handled them.

Fox Farming Stabilized.

Once the breeding problems were solved, fox farming became a wildly speculative business. Breeding stock sold as high as $34,000 a pair, and farmers were more interested in raising foxes to sell to other breeders than in the business of supplying the fur market with pelts.

Gradually fox farming became stable and now it is being carried on profitably by more than 500 individuals in the United States. The silver fox is the most popular with the farmers because it brings a higher price than the commoner red and cross foxes. But the day of extravagant prices for silver pelts is over. They are now rated at hundreds, rather than thousands, of dollars in the market.

The government has specialized in fox farming at its experimental farm and it has developed practical methods of ranch planning, feeding, sanitation, treatment of diseases and general management, all of which are described in government publications.

Other animals have been experimented with less extensively. Minks, which were probably the first wild fur-bearing animals to be commercially farmed in this country, and also skunks, martens, fishers, muskrats and raccoons, have been bred by the government with varying degrees of practical success.

In the case of some of these small animals, such as the muskrat, skunk and raccoon, it is quite possible to raise stock in close captivity, but the market conditions are such that raising them in pens does not pay very well.

Fur farming will probably attract an increasing number of specialist farmers as government experts and other investigators learn more about practical methods in this new business. Farming is a more expensive method of producing fur than trapping, and so it will probably never replace trapping entirely, not, at any rate, if the states protect their natural supply of fur bearers.

F. G. Ashbrook, head of the government fur division, makes the point that the government might well adopt the policy of restocking depleted lands with suitable fur bearers.

Indians Still Hunt Storied Gold of Incas

Buenos Aires.—Descendants of the Incas along the Andes still search to this day for the hidden gold which legend says their ancestors gathered to ransom their emperor Atahualpa from the hands of the Spanish conqueror Pizarro four centuries ago, and which they never delivered, because Pizarro betrayed and murdered him.

The gold promised by Atahualpa was enough to fill the room where he was imprisoned as high as his neck, and is supposed to have been buried and sealed with boulders somewhere in the Andes.

Every summer, when the mountain snows have melted, groups of Indians from southern Bolivia and northwestern Argentina pursue their quest, armed with picks and some of them carrying explosives to blow away the boulders, supposed to cover the treasure.

Last summer, a number of them who had climbed Cerro Colorado, in Argentine territory came across a mound of stones evidently piled by human hands. The stones were solidly fixed in a sort of concrete and resisted their picks. Then with dynamite they blew the mound open. The golden treasure they had hoped to see was not there, but instead the undamaged and well preserved mummy of an Inca chief. A few silver trinkets and a huge strange disc of copper had been entombed with him, but no gold.

The Indians carried their late ancestor to the town of Salta and irreverently sold him a few weeks ago to Justo Ducasse, an archeological collector of Buenos Aires, who has brought him here and tells the story of the discovery. The mummy wears a crown of parrot's feathers as fresh as if they had just been plucked, and a curious blanket of black and white check, with an embroidered red fringe. The long hair is plaited. A long tag attached to the crown denotes he was of high rank.

Britain Plans Gigantic Shed for Zeppelins

London.—Britain is to have an airship shed bigger than the mammoth one at Lakehurst, N. J., roost of the Shenandoah and the Los Angeles. It will shelter one of the two 5,000,000 cubic feet capacity airships which the British government has decided to build.

The shed will be located at Cardington, near Bedford. It is to be an enlargement of the shed already there. Its increased length—812 feet—will make it 12 feet longer than the Lakehurst hangar and 27 feet longer than the shed at Friedrichshafen, where the ZR-3 was built. The height of the Cardington shed is to be increased to 156 feet.

The big British Zeppelins are to be flown regularly, it is hoped, between England and India. Mooring masts, an American invention, are to be installed along the route. The air vice marshal, Sir W. Sefton Brancker, has gone to India by airplane to study the possibilities for airship termini there.

$4,500 for Joke Book

London.—The book sales season has opened in London with several rare editions offered at auction. The chief of these was a copy of the third folio of Shakespeare's plays, which made a record price of $8,000. A copy of "Humor's Antique Faces," a collection of epigrams bearing the date of 1605, and of which only one other copy is known to exist, brought $4,500.

"Hugh Manity"

Lynn, Mass.—Shakespeare's question, "What's in a name?" has been answered by William J. Shanahan, a health instructor and physical culturist. For business reasons, he applied to a judge and obtained permission to change his name to "Hugh Manity."

Successful Foes Are Honored by Britain

One cannot recollect any graceful French tribute to Mr. Pitt or Count Von Moltke; Germany still regards Napoleon through the strained eyes of 1813; Italian estimates of Count Radetzky are lamentably deficient in perspective; and even in Spain, so prone to acquiescence, a just appreciation of Bolivar is long overdue.

But successful insurrection or victorious warfare against British armies is an unfailing passport to esteem in England. No calendar of her favorite saints is complete without St. Joan; no catalogue of patriots would evoke a single British cheer if it omitted a noble American, a blameless Boer, and an Irish name or so. Allies are scrutinized with a more dubious eye; but enemies receive, almost without distinction, a national tribute.

Perhaps it is an inverted form of vanity; perhaps the national greatness requires the attribution (sometimes on slender grounds) of a corresponding greatness to enemies.

For Washington, British tradition has adopted almost without question the richest embroideries of American myth; and the responsibility for his strange disguise rests solely upon his countrymen. His motives, his simple-minded statesmanship, even his military record have been accepted in England at their face value.

The worst enemies of his just appreciation have been his political heirs, the beneficiaries of that lavish testament of freedom; and the problem, if one enters upon the arduous pursuit of truth, is to disengage the figure of Washington from the impenetrable shadow of the cherry tree. —Phillip Guedalla in Harper's Magazine.

Powerful Car Ferry

A mammoth car ferry for use between Anchorage and Baton Rouge, La., was recently launched at Neville Island, Ohio. This boat will be 340 feet in length, will have an extreme deck width of 91½ feet on a molded beam of 56 feet; and will carry at one trip a complete train of mogul engine and eleven pullman cars or 25 loaded freight cars. The cost will be $250,000, and the ferry will be the largest vessel of its type.

POPULAR LOANS
$25 to $500
On your own security. No endorsers required. Cinvenient private offices. Friendly and obliging management. Over 25,000 loans amounting to nearly $5,000,000 is our record since 1913. Resources over $1,350,000. Concentrate your debts and bills in one place. Use our money. A safe place to borrow. City Loan service is popular, helpful, convenient, reliable and safe as a bank account in times of need.

Good Logic.

The young man was a trifler. He liked the girls but did not seem to pick out any one of them to devote his time and attention to. A friend decided to take him in hand and stop his trifling. "Why don't you marry your ideal and settle down?" he asked. "I can't," was the young trifler's reply. "Helen has hair just the shade I'm crazy about. Mabel has eyes that are my ideal, I admire Clare's lips and I enjoy Bessie's conversation. My trouble is I can't get all the ideal qualities I want wrapped up in one girl."

Vienna Life Just One Glad Time After Another

Vienna.—At no time in its history has entertainment been provided on so liberal a scale in Vienna as at present, according to Herr Breitner, the financial expert of the Vienna municipality. He was addressing a deputation pleading for a reduction of the entertainment and luxury taxes levied by the city.

To justify his unrelenting attitude Herr Breitner said that although the population of Vienna has decreased by 300,000, there had been added to the establishment existing prior to 1918 seven playhouses with 4,702 seats; five concert halls, adding 50 per cent to former seating accommodations; moving picture theaters with further seating capacity of 16,000, and 45 fashionable bars.

Moreover, 174 restaurants and 208 cafes had installed orchestras. There had also been established 32 new permanent and 234 seasonal wine gardens, while no fewer than 17,000 licenses had been granted by the police in the last ten months for the celebration of casual entertainments and festivities in this city.

To Count a Trillion

It would take 9,512 years to count a trillion at the rate of 200 a minute. At this rate 12,000 could be counted in an hour, 288,000 in a day, 105,120,000 in a year.

TOYS DO MUCH TO SHAPE BOYS' LIVES

No Doubt That Playthings Have Great Influence.

Have you ever watched parents and fond relatives wandering about aimlessly in the toy department of big stores? They finger this toy and that, worriedly, and finally end by buying something—anything—at the counter that is least crowded.

Such parents lose a great opportunity by neglecting a chance to help their children. A toy is part of a child's education. Just as educators choose textbooks, considering carefully the needs of the child, so should the parent choose toys, writes Ferdinand Strauss, toy manufacturer, in the Popular Science Monthly. For toys should be chosen that will encourage children to think and develop their latent powers.

"America makes toys that teach something, because it has advanced further in the field of child psychology than any other country in the world, and the psychologists have demonstrated that children learn while they play.

"Not long ago I read a story about Orville and Wilbur Wright. When they were little boys in Ohio, their favorite toys were kites and balloons. In playing with them, though, they never dreamed that they would be the men to accomplish through their airplanes the conquest of the air.

"Again and again I find, in reading of the childhood of famous men or in speaking with them, that they spent their play hours with toys that had some definite connection with their later occupation.

"If Lindenthal or Modjeski, the great bridge builders of today, were to tell you of their childhood, you would learn that as boys they spent most of their time making toy bridges.

"Rear Admiral William A. Moffett, chief of the bureau of aeronautics, United States navy, himself told me that as a boy his principal interest was flying kites.

"Carl E. Akeley, the inventor and big-game hunter, the man who raised taxidermy to the level of the arts, spent his playtime as a boy with tools. The gift of a folding pocket footrule, he says, gave him a big thrill, and with his tools he made toys and useful articles for the house. In the heart of a jungle, hundreds of miles from any source of supplies, a man without ability for construction is almost helpless. Carl Akeley is not, for as a boy he possessed a tool chest."

Checking Up

The Skeptics' society, after exhaustive research, has arrived at the following conclusions:

A stitch in time does not save more than three or four at the most.

He who laughed last laughed worst in 86.14 per cent of the tests made.

Where there was smoke there was fire in only 18.93 per cent of the cases examined; in all other cases it was too rich a mixture.

Still waters were not only shallow in nearly every case investigated, but were most easily excited.

In 63 per cent of the tests when a leaper paused to look someone else leaped ahead of him.

Of the burnt children examined the majority were carrying matches and manifested no fear of fire.

Of the mice observed 99.75 per cent did not play at all when the cat was away, but went right to work.

Some very short lanes were found to have no turning.—Life.

Dogs Mate With Wolves

A story reminiscent of Jack London's "Call of the Wild," has come to the bureau of biological survey of the United States Department of Agriculture. Last winter a number of wolves, including three black ones, were reported by different stockmen east of Lodgegrass in the Wolf mountains in Montana. A government hunter, assigned to clear them out, trapped an almost black animal that was obviously part dog, and a short time afterward, in the same vicinity, he killed a vicious dog similar to an airedale, probably the sire of the half-blood. It is believed that most of the wolves in this pack are half-breeds.

Too Patriotic

"Mother, make Jane quit singing."

This gentle command came for the second time from upstairs, where Jimmy and Jane were supposed to have been asleep.

"Jimmy, pay no attention to Jane. Be a little man and go to sleep," answered mother.

"I am a man, mother. Jane keeps singing 'Star Spangled Banner,' and every time I have to stand up."—Indianapolis News.

New Building Material

A company has recently been organized to make a new building material similar to concrete but which is really a combination of portland cement and mineralized sawdust. It is claimed to be cheaper, stronger, and in nearly every way better than real concrete. This represents one of the many answers to the problem of saving forest waste and thereby lessening forest destruction.—Nature Magazine.

Proof Enough

Mrs. Carr (after a motor trip in the country)—I'm afraid our child is not normal, James.

Carr—What's the sign?

Mrs. Carr—We must have passed at least a hundred hot-dog stands and he never dropped a hint.—Life.

INTERIOR PROGRAM OF ATHLETICS

Eagles' Lodge Proposes to Give to the Public High Class Entertainment.

Local basketball fans will have an opportunity tomorrow, Tuesday, night of seeing the Eagle basketball team in action, on the Armory floor, in a game with Washington C. H. and those who attend are sure to be rewarded with a good, fast, snappy contest.

The Eagle team journeyed to Washington a couple of weeks ago and drew the short end of a 30 to 26 score in a well played game, and a game equally as good can be expected when the same teams clash tomorrow night.

The Eagle lodge expects to put two teams in the field for the remainder of the season, one from Ashville, the other from Circleville. William Justus will be manager of the team under the direction of the lodge's athletic committee and will have Loring Kanode of this city and C. W. Sherman of Ashville as assistants.

It is expected to have at least one game in Circleville each week with the Circleville team, a game each week in Ashville and each team will be booked for a road game each week.

Between fifteen and twenty men comprise the squad and two fast stepping teams can be lined up, either of them capable of taking on any team in central Ohio.

The Eagle lodge has laid plans to further an intensive program of athletics and they will give basketball lovers real sport in every game that is pulled off, as a successful basketball season will promote the success of the base ball and football season which are to follow.

It will be the aim of the organization to give the amusement loving people of the town, clean high class entertainment of every class, and hope that in a few years the team's successful athletics and Eagledom will be synonymous.

If you enjoy the game be on hand tomorrow night to give the boys their first local send off.

Birds Not Man's Enemies.

It is a fact that if it were not for the bird life we would starve to death. The great natural enemy of man is any force that will destroy his foodstuffs. Every field is the home of thousands of insects, and agricultural reports will verify the fact that each year millions of dollars' worth of crops are destroyed by insects. And the birds are the natural enemies of the insect pest.

Darwin's Misfortune

"It was somewhat unlucky for Darwin, but fortunate for the caricaturists," Mr. Furniss writes concerning the great naturalist, "that popular opinion credited him with the theory that man originated from monkeys. He was uncommonly like one himself. His intellectual head in profile bore a remarkable resemblance to the ape—his bushy eyebrows, his deep-set, penetrating eyes, short nose, and his thoughtful wrinkled face. . . . I have heard artists advance the theory that men's faces, expressions, and even the shape of their heads gradually take their expression and form from the subject with which they are mentally engrossed. Yet I only recollect one man mentioned as an illustration of that absurd theory—and he was Darwin.—London Tit-Bits.

Hen Takes Pig Family

After a sow at Kent, England, had eaten a setting of eggs, the hen took charge of the pig's litter of seven and is raising them.

FOX DRIVE.

Washington township will put on a big fox drive Saturday, January 31, commencing at the boundary lines at 9 o'clock a. m., Central Standard time and will center on the George W. Trimmer farm near the centralized school.
26janyd5. Committee.

Reasonable Request.

A justice of the peace, who had officiated at a marriage in his office a month previously, received the following note signed jointly by bride and groom:

"Dear Judge, You remember making us two man and wife four weeks ago? Well, everything seemed all right then. We each seemed just the right person to the other.

"But since then things have changed and reflection has convinced us that it must have been a case of mistaken identity. So if you will revoke our license on that ground you will greatly oblige.

(Signed) JOHN HOWARD,
MILLIE HOWARD."
—American Legion Weekly.

First Impressions.

Mrs. McPherson—Can ye lend me a bowl, Mrs. McNeish? I widna jist like our new lodger to take his parrith fra the pot for the first day or two.—Exchange.

MODERN WOODMEN ELECTION.

There will be a special election held on Wednesday, January 28, 1925. All members of Camp 3648 are urged to be present.

Jacob Hatso, Consul
by J. D. Owens, Special Deputy
M. W. of A. 26janyd2.

Save half at Friedman's the last three days of this week. 26janyd7.

You Pay

for a DeLaval whether you buy one or not—

If your separator doesn't skim clean you are feeding your pigs and chickens enough butter-fat—which is always the equivalent of cash money—to pay for a new clean-skimming De Laval.

We recently heard of a farmer who more than doubled the size of his cream checks by replacing an old separator of another make with a new De Laval. You may not get such an increase, but you will certainly get some when you put a new De Laval to work—enough to pay for it in a comparatively short time.

Bring in your old separator

We will accept it as partial payment for a brand-new, up-to-date De Laval—the separator with the wonderful self-centering bowl, that skims cleaner, runs easier and lasts longer. It pays for itself by saving the fat that other separators waste.

REVIVAL MEETINGS CLOSED.

The revival meetings at the Pontius U. B. church closed Sunday evening, January 18, with good results in conversions, quickening of the church, increased interest in the church work and a request for a Christian Endeavor society.

A society was organized and three were received into church membership on confession of faith, others will be received next Sunday when the rite of baptism and the communion will be given.

Next Sunday evening, February 1, special meetings will commence at the Dresbach U. B. church. These meetings are only scheduled for two weeks so do not let "Mr. Put-It-Off" steal away your time.

WE PRINT THE NEWS

Screen Opera Planned

A new departure in moving-picture production will take place shortly on the leading Paris stage, for M. Rouche, director of the opera, is arranging to show films with a musical accompaniment of special significance. The plan has been under special consideration for a couple of years, but there were objections not easy to overcome, says the St. Paul Dispatch.

For the first opera movie the "Miracle des Loups" is the film selected, for which M. Henri Rabaud of the institute, director of the Conservatoire of Music and a well-known composer, is furnishing an original musical score. This blending of the oldest and the youngest of the arts naturally will interest both the vast public of the opera and that of the film halls, where the musical program has come to be recognized as of great importance to the effect produced by the pictures.

Youth's Greatest Trial

The saddest thing about life is it takes 50 years for young people to learn what they should know.—Columbus Record.

Anxiety

Modern Mother—Yes, I know the baby is pretty, auntie, but the question is, has she style?

Many Legends About Scots' Patron Saint

From time immemorial, St. Andrew has been the patron saint of Scotland, to whom November 30 has been dedicated. He first comes to our knowledge through the gospels, which state that he was the brother of Simon Peter, and a son of Jonas, a fisherman of Bethsaida, on the northwestern shore of the Sea of Galilee. He had been a disciple of John the Baptist, but left his former master and attached himself to our Lord, to whom he brought his brother, Simon Peter, says the Springfield Republican.

The traditions about St. Andrew are various. The early Father Eusebius states that he preached in Scythia on the north side of the Black sea. Jerome and Theodoret named Achaia, or southern Greece, as the field of his labors after the ascension of our Lord; and he is said to have been crucified at Patras in Achaia on a cross in the form of the letter X, known since then as St. Andrew's cross.

Two hundred and eighty years later his bones were removed to Constantinople. About the year 600 they were again exhumed and committed to the care of a pious man named Rule or Regulus, who, after a stormy voyage of a year and a half, was wrecked on the promontory of the Wild Boar on the North sea, now the coast of Fifeshire, Scotland. Out of the wreck Regulus saved the bag containing the bones of St. Andrew.

Regulus was received with gratitude and affection by the people; a piece of ground was gifted by the king to God and St. Andrew, and the bones were again interred. In a cave in a sandstone cliff hard by Regulus took up his abode, to guard the place where the treasure lay and to preach the gospel of Christ. Through the preaching of the holy man many of the Picts were converted and the little monastery of wicker work or chapel of rude stones gathered from the neighboring beach, which had been built over the place where the bones of the apostle had been laid, became a place of sacred pilgrimage. A little town sprang up close by and received the name of St. Andrew's. The great cathedral of St. Regulus, the ruins of which still dominate the old town, was erected in honor of him who had brought to the place the bones of the apostle, and renown. In this way St. Andrew became the patron saint of Scotland.

"Hold the Fort"

"Hold the Fort," one of the most popular of religious songs, was first sung by its author, Philip Paul Bliss, the "singing evangelist," at a revival meeting presided over by Dwight L. Moody.

The author of this and many other famous devotional songs was born in Pennsylvania. His boyhood was passed on a farm. At the age of nineteen he attended a singing school and was inspired with the ambition to become a composer of songs. He entered a musical college and in 1860 commenced his career as a composer, singer and teacher. Some years later he met Dwight L. Moody, the famous evangelist, and was induced to join the Moody staff. To this work he devoted the remainder of his life and became internationally famous.

KEEPING WELL

A GOOD STORY FROM DR. CHARLEY MAYO

DR. FREDERICK R. GREEN
Editor of "HEALTH"

WHEN a newspaper runs an item on the first page you may be sure that it's what a newspaper man would call a "good story."

When all the newspapers that get it put it on the first page, you can know that it's a mighty good story.

In a recent talk before a Kiwanis club Dr. Charley Mayo, one of the celebrated Mayo brothers of Rochester, Minn., made two statements that every newspaper considered a front-page story.

Doctor Mayo's statements are known to all intelligent physicians, yet to the newspaper men and the general public they were evidently astonishing.

Doctor Mayo said that the warfare against human disease had made greater progress during the last twenty-five years than in the preceding twenty-five hundred years. This is not a mere figure of speech. It is literally true. While much of our knowledge regarding the causes of disease was discovered from 1850 to 1900, the practical application of this knowledge has been made in the last twenty-five years. In this period, yellow fever has been practically wiped out, Asiatic cholera, typhus fever, bubonic plague, leprosy, malaria, typhoid, hookworm and many other of the great epidemic diseases that for centuries have killed millions of people, have been greatly reduced and can now be largely prevented in civilized countries.

Doctor Mayo's second statement was that if every person were carefully examined once a year, so that unsuspected diseases might be checked in the beginning, greater progress would be made in the prevention of disease in the next twenty-five years, than has been made in the last twenty-five years.

This statement is also strictly true. Our governmental organizations, city, state and national, have largely taken over the control and prevention of epidemic diseases. The great problem of today is the control and prevention of personal diseases. These can some of them be cured, but they can practically all be prevented, if taken early enough.

The good farmer overhauls and repairs his machinery at least once a year. Every sensible man has his watch cleaned and regulated that often. Have your body machine looked over and adjusted every year and it will run easier and better and there will be less danger of a breakdown.

(©, 1924, Western Newspaper Union.)

Hanover, Pa.—A pack of rats recently invaded the cafe of John Michael, Railroad street, and ate up $50 worth of chewing gum. The rodents passed up cheese, sweets and pastries on the same counter. Early passersby said they saw rats coming from a sewer grating in an effort to get rid of the gum.

LOST RUM RUNNER WAS BUILT FOR SPAIN'S KING

Guilia, Sunk Off Coast of California, Had Romantic Career During Forty Years.

San Pedro, Cal.—With the sinking of the rum ship Guilia off the coast of northern California recently, it was revealed here that the vessel had a history of romance and adventure and was said once to have been owned by a king of Spain. Here is her history as told on "the beach":

When built 40 years ago for the Spanish king, the graceful clipper yacht, equipped with gold fittings and priceless draperies, was the envy of European royalty.

From the service of the king the vessel passed to that of an English merchant prince, then successively to war service, to a band of British adventurers who called her the Frontiersman, and finally, after the adventurers were bankrupt at San Pedro, into the liquor trade. She was not wanted by the legitimate lines of shipping, because she was a coal-burning vessel on an oil-burning coast.

Her decks equipped with machine guns to keep away robbers, she sailed for Havana under the new name of Guilia. Returning from Cuba, the Guilia ran out of fuel off the west coast of Mexico. Her cabin was torn down and fed to the boiler fires and, as a last resort, part of her rum cargo was fed to the flames a bottle at a time.

At Ensenada, Lower California, 35 tons of coal were obtained, and the crew prayed that this fuel would take them to Vancouver. But her progress was retarded by a storm and again the Guilia ran out of coal. She founded at sea, a forbidden visitor to the nearby California shores which alone could give her aid.

The one-time royal clipper yacht went to the bottom, an abandoned rum runner, scuttled by her crew, reports say. All the members of the crew were rescued by a passing ship and brought to San Francisco.

Meteorite Is Memorial for Heroes of War

Beatrice, Neb.—A gigantic stone, weighing many tons, said to be a fallen meteor, according to the stories told by old settlers of the vicinity, has been removed from its earthly bed, south of the city, and placed in the city park. Sixteen horses and two weeks' time were required to transport the stone half a mile to the park.

It will be used as a memorial to those who gave their lives in the World war. Their names, engraved in a bronze tablet, will be set in the stone.

All Ready-to-Wear goes at half price at Friedman's the last three days of this week. 26janyd2.

AMUSEMENTS

Spectacular scenes of famous episodes of the American Revolution are ccurately reproduced in "Janice Meredith," Marion Davies' pretentious and beautiful Cosmopolitan production, which starts a three day run on Monday at the Met theater.

The skirmish at Lexington—"the shot that was heard around the world" the breathless moment of suspense, waiting to see whether the British would fire the first shot in the American Revolution; the dauntless Minute Men bravely fighting against frightful odds—this is one of the thrilling scenes of the production.

Crossing the Delaware.

Washington crossing the Delaware, a living reproduction of the famous painting by Trumbull, is also a gripping chapter of the photoplay. A channel 400 feet wide had to be cut thru the Saranac river in the Adirondacks to permit the crossing of specially constructed flat boats and rafts, transporting the soldiers and loaded with cannon, oxen and supply wagons

Paul Revere's immortal ride—when his horse's hoofs resounded thru the night, when startled heads appeared at windows in answer to his call ,and when he took desperate jumps over fences and hedges, is full of thrills and artistic effects.

The Battle of Trenton—Washington's timely attack, and the victory is vivid and gripping, a magnificent bit of history.

The Boston Tea Party, a magnificent night scene; Patrick Henry's impassioned speech; and numerous other incidents of the days of the Revolution are included in this stupendous production which, under the direction of E. Mason Hopper is a stirring page from history.

"Janice Meredith," Lillie Hayward's picturization of Paul Leicester Ford's romance, is distributed by Metro-Goldwyn. The settings are by Joseph Urban.

WEDDING NIGHT

Across her casement sill she leans
Above the smoky haze which screens
The crowding houses, set arow,
The sickle moon, the furnace glow,
The river with its measured flow.
Not these she ponders on nor sees
The nightfall with the falling breeze.
Her soul, remote, walks nunlike ways;
Her spirit bows itself and prays.

Yet one—how bold!—disturbs her there;
A strange foot climbs the virgin stair;
One leads her forth and none knows where.
What happens when a woman goes
White-veiled and garlanded with rose
Along the church aisle's narrow close
To yield her dreams for ecstasy?
On what high thoughts turns she the key
To swing the door on mystery?

Ah, often when the dusk is still
My seeking eye will scan her sill.
Above the mist as gloaming dim,
Firelit and scarlet at the rim,
Outlines her windows curtained square
And shows that casement lone and bare,
How often shall I question: Where
Is she who used to linger there
To breathe her nunlike twilight prayer?
Along what strange road does she fare?

—New York Sun.

Turtle's Wound Healed by Skillful Surgeon

No, sir, you can't fill the teeth of a turtle; it hasn't got any to be filled. But, after all, it's not so well off at that, because when anything goes wrong it can happen in so many places.

As a matter of fact, it offers the largest practice ground for dentists known to science. Although its teeth can't be filled, most of the rest of it can be. That was proved recently.

There arrived in New Orleans on the steamer Heredia an Atlantic green turtle, name and address unknown; age, twenty-five years; weight, 200 pounds; height, inconsiderable. When the turtle reached the aquarium, W. G. Schaumberg, director, discovered that its shell had been punctured.

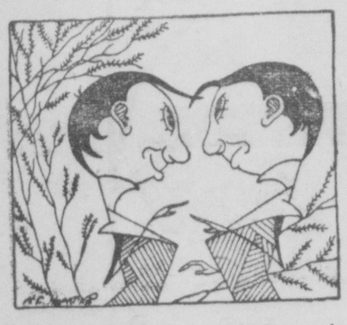
Through the hole, which was an inch in diameter, the turtle had shipped a quart or more of water. This was drained out and a piece of shell removed. Then the hole was rinsed with a dilute solution of carbolic acid.

Then came the filling, a liberal dose of melted paraffin. This was covered with a layer of adhesive plaster and a coating of warm tar. The turtle now sits up and takes nourishment, which consists of about two pounds of fish a day.—St. Louis Globe-Democrat.

British National Anthem

Henry Carey is credited with being the author of the British national anthem. He died in London in the year 1743. The anthem came first into fame in the autumn of 1745, when it was sung, and encored with repeated huzzas, at Drury Lane theater, as a loyal retort to the proclamation of the Pretender at Edinburgh. Carey's authorship has been discredited by several good authorities. One story goes that the anthem was sung in Latin in James II's chapel, and was preserved as a Jacobite hymn, the music from an air composed by Dr. John Bull, first Gresham professor of music. Carey died, after a lifelong struggle for existence, leaving a family in want; yet he had given us a blessed heritage in the ballad, "Sally in Our Alley." He added to our language the expression "Namby-pamby," a title of some of his verses.

MISSING A CHANCE



"Half the world doesn't know how the other half lives."

"Then why doesn't congress investigate the matter at once?"

Peculiar Ant Species

The London zoo reports the arrival of a colony of umbrella ants from Trinidad. They are called umbrella ants because they live on rose petals. Petals, which the ants eat, are ordinarily not used as umbrellas, but in this case they are. The ants drag the rose petals to and from their hills, much like a person carries an umbrella. In Trinidad, the rose petals are used as sunshades rather than as umbrellas.

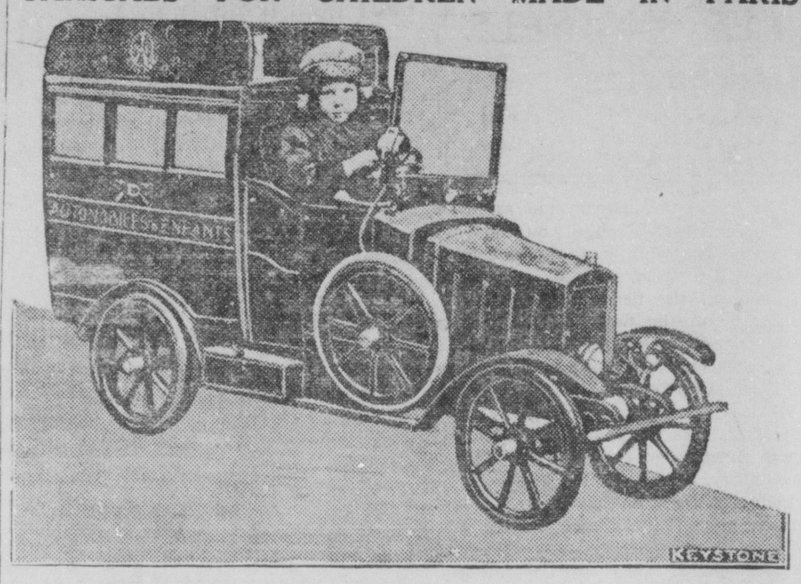
Honesty Defined

On being asked by his son to explain the meaning of the word "honesty" a father replied: "My son, the word 'honesty' is a hard word to define. People have a variety of views on that subject, but I think I can explain to you by an illustration. Supposing you went to the bank with a customer's check for $50, and by mistake the paying teller gave you $60. Well, if you gave your partner five of that extra ten, that would be honest."

Gale Plays Queer Prank

When a gale struck the home of George Nelson in a small New England town it ripped off one chimney on his house and blew a hole through the other, leaving a stable shell and in no way disturbing the top layers of brick or other parts of the building.

TAXICABS FOR CHILDREN MADE IN PARIS



A diminutive motor car, complete in details as the larger ones are, has been produced in Paris and is making quite a hit, many parents buying them for the children to run around in. As they are recognized as vehicles, they get as much right of way as others, thus cutting down accidents to children.

OVERHEATING MAY DO MUCH DAMAGE

Cooling System of Automobile Should Be Kept in Best Condition.

By ERWIN GREER, President Greer College of Automotive Engineering, Chicago.)

You have all seen the fellow who pushes his steaming, clanking car about town. It looks for all the world like a baby locomotive, but perhaps what you and he don't know is that this overheated condition injures the pistons, the cylinders, the bearings and all internal parts of the engine. Of course, it is likely to cause damage to some of these parts and shortly he learns this himself—after he has paid a big repair bill for information that could have been gleaned from any instruction book.

If you run the car with its spark retarded the engine will overheat. Carbon, a crippled fan and impeded water flow through the cooling system will also cause overheating.

Stop and Investigate.

When out driving and your car overheats it is imperative to instantly stop and find the trouble. In an emergency a very wise thing to do is to pour an abundance of oil into the crank case. Of course your exhaust will smoke, but the additional oil will offer a protection to the inside of the engine until relief is at hand.

The fan is one of the most important parts of the cooling system. If the belt slips so as to reduce the fan draft it must be adjusted, but in making the adjustment do not get the belt too tight for it will break. Clean the belt in gasoline every so often and rid it of the oil and gummy matter. Hitch up your garden hose and send its spray through the openings in the radiator that probably are clogged with mud. But do this from the engine side of the radiator, otherwise you will short circuit the electrical system.

Radiator May Be Clogged.

If the engine still overheats it is probable that the inside of the radiator is clogged, so disconnect both the inlet and outlet and plug them with corks. Now make a mixture of half-and-half vinegar and water and fill the radiator to its brim. Let it stand for half an hour. Then allow this mixture to drain off and put the nozzle of the hose into the inlet of the radiator. Turn on the water and let it run for an hour. The flushing should be very thorough as the vinegar remaining in the tubes would eventually eat them to a certain extent. Then connect the radiator and your trouble will be found to have disappeared, provided that a clogged radiator was the cause of the overheating.

The ideas outlined above are not new, nor are they the only ways and means of accomplishing your purpose, but they give satisfaction, are not complicated, costly nor unduly time-consuming. Try them and see.

How to Apply Brakes and Prevent Skidding

Do not apply the brakes suddenly when driving on a wet pavement. Such action is liable to start a skid. If that does occur, turn the steering wheel in the direction of the skid. At the same instant release the brakes. Better control will result if the brakes are applied gradually on and off. Many drivers lose their heads in such emergency, and feel that they have done everything possible when they have locked the brakes.

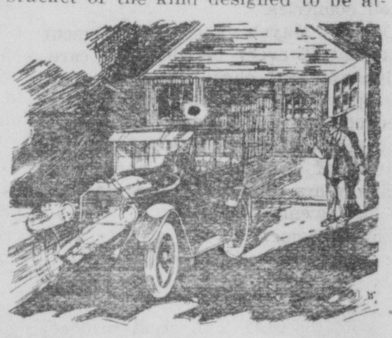
Don't permit the driving wheels to slide either in starting or stopping. Gradual clutch and brake engagement will avoid this. Don't run the car any distance on a deflated tire. At the first warning stop and make the change. Nothing will break down the tire walls more quickly.

Don't try to make every hill in high speed. Nothing is to be gained by so doing. Your gearset is designed to meet such requirements. If you persist in this practice you will soon find it necessary to refit the engine bearings, and furthermore, you will greatly reduce the tire mileage of the driving wheels.

Don't approach a down grade at speed and then apply the brakes suddenly to bring the car under control. Many accidents occur from this cause, especially on wet roads. Aside from this the tires suffer and the brakes wear out quickly.

Backing Light for Cars Helps Driver at Night

To facilitate backing an auto out of a garage or over a winding drive at night fasten a small spotlight under the running board on the driver's side of the car, as shown. An ordinary flashlight can be used for this purpose; it may be held between two spring clips, screwed to the underside of the running board. A permanent installation is, however, more convenient. A cheap reflector and a bracket of the kind designed to be attached to a single dry cell, are used. The bracket is straightened out so that it can be clamped under the rear running-board brace. The leads to the socket in the reflector are connected to a switch on the instrument board and to the storage battery, and a lamp suitable for the voltage of the battery is inserted in the socket. The light beam will illuminate the entrance to the garage sufficiently to steer the car into it without trouble.—Walter C. Harris, Brooklyn, N. Y., in Popular Mechanics Magazine.



Small Light Under Left Running Board Facilitates Backing Up at Night.

Changing Tires on Car Will Increase Mileage

Changing truck or passenger car tires at regular intervals from one wheel to another will increase the mileage of a set of tires to a greater degree than the average owner realizes. Tire companies have done a great deal of experimental work along these lines during the past few years.

"Engineers," says a representative of a tire concern, "have made exhaustive tests relative to comparative wear on tires in various positions. They have learned that those on the right wheels are subjected to greater wear than those on the left, and those on the rear wheels to more than those on the front.

"Thus it readily can be seen that occasional changes will effect more equal distribution of wear with a consequent increase in mileage.

"Records have been kept at a certain factory on a large number of tires, which have run in the aggregate more than 8,000,000 miles. Some of these tires have been run continuously in the same positions. The records show that the average tire on the left front wheel will give nearly twice as much mileage as the one on the right rear wheel.

"The mileage in the various positions, therefore, will be approximately the following proportions: To one mile of service on the right rear wheel tires will average 11-10 miles on the left rear, 1½ miles on the right front and 1¾ miles on the left front. In other words, the average tire that would run 6,000 miles on the right rear wheel would run about 7,000 miles on the left rear, 9,000 on the right front and 11,000 on the left front wheel."

Unique Use for Honey During Severe Weather

The recent cold weather raised the problem of how to keep the radiator of our automobiles from freezing. In some sections where alcohol is more in demand for other purposes, honey is being used as an anti-freeze solution in automobile radiators, according to Dr. F. H. Lathrop, chief of the entomology division of Clemson college.

To prepare the anti-freeze honey solution, measure out half enough water to fill your radiator, and add an equal volume of cheap strained honey. Bring this to a boil and add one quart of wood or denatured alcohol for each three gallons of solution. After this has boiled from three to five minutes the scum should be removed from the top, and the solution is ready for use.

This honey solution is cheaper than alcohol and has other desirable features. It should not be used, however, where the radiator itself or the hose connections are leaky, or where the engine gaskets are not perfectly tight.

Highly Imaginary

The "Land of Cockaigne" was an imaginary land of idleness and plenty in which the houses were roofed with cake, the rivers ran with wine and roasted fowl offered themselves to be eaten. The name was applied in derision to both London and Paris following the writing of a satirical poem entitled "The Land of Cockaigne" about 1300.

First Presidential Salary

George Washington, the first President, refused a salary, saying that he would accept expenses only. President Washington kept a minute account the first year and found that he had spent 5,000 English pounds, about $25,000. For this reason the salary of the President was fixed at $25,000.

"Burnt War Department"

The War department was housed in a building on the south side of Pennsylvania avenue between Twenty-first and Twenty-second streets, and this was destroyed by fire in 1801. The blackened walls stood for many years and the ruin was known as the "Burnt War Department."

Keeping Down Pests

If it were not for the natural enemies of every insect, many that are not especially obnoxious now would soon become universal pests. Government experiments a few years ago showed that about 95 per cent of native caterpillars are killed by parasites.

FARMS FOR SALE.

153.70 acre tract, 4 room frame dwelling and summer kitchen good 6 horse frame barn including 4 stalls for cows with metal roof and concrete floor, double corncrib, smoke and poultry house, concrete hog lot, plenty of water, fairly fenced, well tiled all tillable located 1½ miles from school and market on a good pike where you have access of the traction line current; $125 per acre.

Has Used Over 200 Bottles in Nine Years.

Grove City, September 6, 1924.

Mr. F. L. Fickardt
Circleville, Ohio.

Dear Mr. Fickardt:—

Perhaps you do not remember the incident but about nine years ago I tried out Fickardt's Roup and Cholera Drops to satisfy in my own mind the truth of the statements I had heard.

I took two equal number of birds in exactly the same condition and tried out your Drops as against another Nationally advertised poultry remedy. I used both as the directions stated until I thoroly satisfied myself that Fickardt's Roup and Cholera Drops were superior for the use that it is intended. Since I convinced myself that Fickardt's Roup and Cholera Drops were the best, I have used it exclusively on all my poultry and in all that time I have never had an epidemic of any kind.. I firmly believe this is due to keeping your remedy before them all the time.

I know that I have returned more than two hundred empty bottles, but how many more I bought I can't tell. Altho you do not make any claim for your remedy as an egg producer I can because I get more eggs now that I did before I used Fickardt's Roup and Cholera Drops. This is probably due to the fact that my chickens are always in first class condition.

My eggs and butter pay our household expenses. I would not undertake to raise poultry without Fickardt's medicine.

Sincerely,
Mrs. John R. Shelton

Fickardt's Roup and Cholera Drops.

Is a remedy for Roup, Colds, sneezing, Canker, Limber nick, Chickenpox, White Diarrhoea, Indigestion and bowel complaint. Price 50 cents.

Sold by druggists and general stores.

F. L. FICKARDT
155 West Main Street,
CIRCLEVILLE, OHIO

Christian Science Temple

The original cost of the land on which the mother church of Boston, Christian Science, was built (gift of Mrs. Eddy) was $20,000. The cost of the original edifice was $200,000, including the organ, which cost $10,000. The estimated present value of the lot, with its extension, is $150,000, and the cost of the temple extension $2,000,000. Its seating capacity is 5,000 and it was dedicated in 1906.

In Earth's Interior

It is strange that an expedition into the earth's interior has never been seriously attempted. If we could sink a shaft only twelve miles into the ground we might strike all the coal and oil that would be needed in a million years. In all likelihood we should find radium, gold, silver, diamonds and other gems of untold wealth, as well as wonderful metals and fresh sources of energy.—London Times.

Important Finds

Three important archeological discoveries were the Rosetta stone, found in 1799, which bears a proclamation in hieroglyphics, Demotic and Greek; the excavations at Thebes, which opened up the Ramesside and neighboring periods, 1500-1000 B. C.; and the temple library at Nippur.

Value of Good Reading

Herbert Spencer and other philosophers have advised the daily reading of some page or even single paragraph of great literature, dwelling on the sublime, majestic and beautiful in nature and life as a means of purging the soul of pettiness, greed and vulgarity.

The Sunlit Moon Is Hot

Recent estimates of the surface temperature of the moon while the sun is shining on it indicate, says Dr. D. H Menzel, that the rocky surface may reach a temperature of 248 degrees Fahrenheit, which is well above the temperature of boiling water.

The World Moves

An explorer says that widows in New Guinea cover themselves with pipeclay and mourn their husbands for a year. In civilized countries most of them cover themselves with powder and go in search of another.—The Humorist (London).

White House Furniture

The furniture in the White House is owned by the nation. The new President brings only such personal belongings as he may care to have with him during his term of office, and removes the same when his successor is inaugurated.

A Paper Kettle

To boil water in a paper bag all you have to do is to fold a piece of paper so that it will hold water, and then suspend it above the flame of a lamp. The paper will not burn, because the water will absorb all the heat.

Possible Truth of a Fable

The food research bureau of Leland Stanford university announces that the moon has agricultural possibilities. So there may be something in the nursery tales of the jumping cow and the great cheese after all.

Buddha Escapes

The great bronze Buddha of Kamakura, that escaped the ravages of the earthquake in Japan, was set in its present place in 1252 and since then has passed unscathed through many cataclysms.

Colorado's Nickname

Colorado was given the nickname "Centennial State" because it was admitted to the Union in 1876 when this country was having its centennial celebration of the Declaration of Independence.

Pleasure's Pain and Power

To know the pains of power we must go to those who have it, to know its pleasures we must go to those who are seeking it; the pains of power are real, its pleasures imaginary.—Exchange.

Explaining Rain's "Odor"

Rain has no odor, but in falling purifies the air. Often rain is produced by electrical charges in the air, and these charges produce a gas called ozone, which has a delightful fresh odor.

Indians as Merchants

Composed of Indians, ranging from the wealthy of importing houses to the itinerant peddlers, a commercial organization is an important factor in the business world of east Africa.

Has Another Meaning

We used to feel sympathetic when we heard of a young girl who had to "shift for herself," but now it might refer to her handling the levers of a handsome roadster.

Quarry Hard to Catch

A "wild goose chase" is a pursuit after something that is as unlikely to be caught as a wild goose. The term alludes to the difficulty in shooting wild geese.

Written by a Man

Job had patience, but he never had to stand in line at a bank window with two women ahead of him.—Toledo Blade.

Stray Bits of Wisdom

Exaggeration is a blood relation to falsehood and nearly as blamable.—Hosea Ballou.

Pretty Togs Need Not Be Expensive

Materials at Moderate Cost Aid Women to Dress on Limited Income.

This season there are so many inexpensive cloths of good material and of good lines that anyone with taste can be well dressed, asserts a writer in the Detroit News. Take, for instance, those snappy little short fur coats which can be made of anything from goat fur to sable! Some of these are selling so cheaply as to come within the means of any working girl. Cat fur and goat fur, dyed in deep rich browns, may not resemble the more expensive furs but they do have smartness and chic. Who knows at the first glance whether they are real mink or dyed cat? And who cares? It's the fit of the little frock beneath the coat and the shape of the perky little felt hat above it that creates an ensemble worth looking at.

A girl can spend several hundreds of dollars on a fur jacquette and from $50 to $100 on her hat and some clever little person with quick wit seizes the opportunity of copying her costume and appears a week later in a cheap duplicate which she wears with an air that absolutely outclasses the owner of the original model. Sure enough, women know the difference between cat fur and sable.

The well dressed woman doesn't attempt to set styles of her own if she has a limited dress allowance. She knows that she can't hope to compete with the lines set by fashion designers. She sees something smart in a shop window or on a well dressed woman and, choosing her own coloring, follows in cheaper materials the standard set by her wealthier sister.

Many women like to feel that they are original in dress. They will purchase a fashion book and create a gown with Lanvin sleeves, Poiret waistline and Madelaine skirt and add trimmings approved by some other designer. The finished dress looks like a Christmas tree. It has neither style nor chic and is ruined by the combination of different patterns. The designer has a reason for everything he or she does. If her frock has long sleeves it should never be made without sleeves. If it is long as to hem, it is because such a frock requires a long hemline.

The home dressmaker should realize these facts.

Accessories are very important these days, and it is these cheap little accessories which make or mar one's ensemble. Just now well dressed women are wearing more subdued shades of hosiery. One can tell at a glance whether one is up to the moment in hosiery shades. Pinks and flesh shades are no longer worn for street wear. Wood shades, light tans and browns and grays are good. Gunmetal accompanies the black shoe and occasionally one sees the oyster white stocking worn when the costume is a black and white affair.

Promises to Be Fashion for Spring and Summer

Shown at a recent spring and summer revue of smart modes for spring was this frock of brown chiffon over gold cloth, trimmed with kolinsky tails.

Leopard Spots Remain

The leopard cannot change his spots, but even if he ever wanted to he would hardly be allowed to do so this season, for leopard's spots, as exemplified in leopard fur, are on the high tide of fashion, and are used in trimming not only coats, but also dresses, in a very subtle manner, and one quite befitting the grace of the feline from which the pelt is obtained.

Hats Growing Higher

Hat crowns are growing higher. One new model is an exact reproduction of a man's "topper," except that it is in log cabin brown velvet and has a wide band of black satin around it.

The Last Day

By PHILIP E. STEVENSON

(© by Western Newspaper Union.)

WHEN Yeng-See, the new galley cook, came aboard the Shansi Maru at San Francisco, his oriental intelligence told him that he had joined an exceptionally erratic crowd of men. His eastern calm had become used to the antics common to white men, but, carried to lengths reached by Nansen the bos'n, Clark the radio man, and Araqui, one of the seamen, the amusement involved was no longer intelligible to Yeng-See.

One day, Yeng-See squatted against the deckhouse beside the galley door. Andy, the Scotch quartermaster, was beside him, talking, as he loved to do, about China and the eastern view of life.

Their casual, lazy talk—the best kind of talk in the world—was broken into by Clark and Araqui with news.

"Lookeer, Yank"—they called him Yank because he disdained to use the pidgin English, and spoke almost like an American—"that poor ham-an'-egger Gillo wants to make a bet with yer."

"Yes?" Yeng-See knew they were at one of their eccentric jests again.

"He bets you'll walk out this here galley door between one and three in the morning."

"Those times," said Yeng, the practical, "I sleep."

"Si! Yeh!" Araqui broke in, excitedly. "'Ueno! You sleep. Then you ween bet—ten, no, twen't daller gold!"

"I don't have twenty dollar," protested Yeng.

"Wait," broke in Andy, spitting over the side. "What day, Clark?"

"Tomorrow— Here, we'll write it all down."

Andy smiled. While the others were gone, busy with the document, he took Yeng-See by the arm.

"How would you like four quid, Yank? Dollars are good money these days. Blimey!"

Yeng thought that, on the whole, he would like them.

There was some whispered argument between them before the others, their forces greatly augmented, returned to read their agreement, as follows:

"Gillo here now, and Yeng, the cook, agree to bet. Gillo bets Yeng walks out his galley door between one and three in the morning. Yeng bets he don't. Stakes $20 gold."

"Put in the date," said Andy, who was leaning over the side and seemed not to listen. "And Yank stakes his jade amulet instead o' cash against the twenty."

When the cook made coffee for the mid-watch that night he remembered Andy's warning to be below again before one o'clock. He wondered somewhat, with cosmic indifference, at the trivial things that white men thought important; but not even the thought of the possible loss of his precious amulet disturbed his yellow slumber, and half-past five found him again in the galley, serene overlord of the crowded range.

A clatter of shoes in the companion ladder heralded the appearance on deck of Nansen, Clark, Araqui, Gillo and others.

"Yank! Comeer—come, look—see! Yank! Oh, Yank, come quick!"

There they all were, taking excessive interest in some trifle over the side.

"Out here, Yank. Can't see nothin' where you are."

Yeng stepped out—and was met by a blast of amused roaring.

"Gillo wins—outdoor—one—three—amulet—morning—pay up now—tough, Yank—look!"

Yeng was bewildered. They all talked at once, pointing to the jambs of the galley door, plucking his sleeve, demanded his amulet, his treasure. . . .

Clark grinned sheepishly. "Gillo wins 'e bet," he said.

"How's that? Yank was in bed between one and three this morning." Andy's eyes sparkled.

"Well, lookeer." Clark pointed to each door-jamb in succession. On one was scratched faintly a figure 1, on the other a figure 3. "Yank walked out this door between 1 an' 3, in 'e mornin', didn't he? Don't Gillo win? H—l!"

The suppressed mirth of the crew burst its bonds at the disclosure of this ruse.

"Got the agreement handy?" asked Andy. It was passed to him. "I thought so. Gillo, pay Yank twenty dollars gold—pronto! Says, 'En the morning o' July 16, 1923,' don't it, bos'n?"

"Ya-as."

"But today's the seventeenth."

"Nex, Andy. Yesterday bane fifteenth."

"Right. But maybe you forgot! We crossed the bloody International Date line after midnight last night. So, sailing westerly, we skip a day when we pass the line. The sixteenth lasted only from midnight to about twelve-forty this morning when we crossed the old line and changed the date to the seventeenth. It's all in the log. But, blimey, bos'n, what kind o' sailorman are you? Ought to've know that. And when I saw you bums putting up a skin game on Yank 'ere, I let you ride—and spill! Hurt you any?" . . .

Yeng had long since retired to resume his stirring. He knew that Andy had turned some trick on the crew and that twenty dollars now jingled in his pocket; but how, or why—he could not puzzle out. White men concerned themselves with such inexplicable trifles. . . . It was quite a waste of time.

Optimistic Thought.

A man, said Talmage, never looks more dignified than when he takes a spectacle case from his pocket, opens it, unfolds a lens, sets it astride his nose and looks you in the eye.

Look at the Best In Sight.

Get into the habit of looking at the silver lining of the cloud; and, when you have found it, continue to look at it rather than at the leaden gray in the middle. It will help you over many hard places.—A. A. Willis, D. D.

PROMINENT DEMOCRATIC POLITICIAN

Dr. George B. Nye Died at Home in Waverly After Short Illness.

Waverly, O., Jan. 24— (United Press)—Dr. George Burl Nye, 49, former state representative and a delegate to the last national Democratic convention, died here last night after an illness of five days.

Dr. Nye was one of the members of the 79th general assembly indicted for bribery in 1911, but was acquitted. Four other members received penitentiary sentences.

About Left-Handedness

There is an old tradition that left-handed people are mentally inferior to right-handed people. Dr. Kate Gorday, a Los Angeles psychologist, says his belief was not confirmed by comparative intelligence tests which she gave to a group of over 1,000 children. The left-handed children did as well in the tests as the others. However, Doctor Gorday came to the conclusion that there is a large percentage of left-handed individuals among subnormal persons. She also found that there are more left-handed boys than girls. It is estimated that between 3 and 4 per cent of the population of this country are left-handed. Whether or not left-handedness is hereditary in some families, as claimed by some authorities, is still a disputed question.—Pathfinder Magazine.

The Way of Childhood

The teacher at the conclusion of a lesson in grammar asked the class in turn to give an example of an abstract noun.

"Manhood," suggested the head of the class, which was duly approved by the teacher, the example being followed by the next two members of the class with "womanhood" and "girlhood," respectively.

The fourth little girl, disdaining anything so obvious as "boyhood," gave as her example "Little Red Riding Hood."—Kansas City Star.

Optimistic Thought.

To enlighten his subjects is the true province of a ruler.

KEEPING WELL

PELLAGRA

DR. FREDERICK R. GREEN
Editor of "HEALTH"

PELLAGRA is a mysterious disease, which, until a few years ago, was supposed to be found only among the peasants of Spain, Italy and France. The name means "rough skin" and was given to it on account of the peculiar and characteristic rash, which appears on the back of the hands and the forehead, usually in the spring and summer. The other symptoms are a persistent diarrhea and a marked nervousness, which, in long continued or severe cases, may develop into insanity.

It was for many years thought that there was no pellagra in this country. Osler, in his textbook on medicine, written 30 years ago, says flatly that no case has ever been seen in the United States. This was also believed to be true about hookworm, yet we know now that there are many thousands of cases of each of these diseases. They were present but they were not recognized. As soon as American doctors learned what the disease was like and started to look for it, many patients were found, especially in the Southern states. It was also found to be very common among inmates of insane asylums, poor houses, work houses and the like.

No one knows positively what is the cause of this disease. It has been believed for centuries by the peasants of southern Europe that it was caused by a disease of the maize, a grain largely useful for food in those countries.

It is now pretty generally agreed that it is caused by poorly balanced food. It is found among the negroes and "poor whites" of the South, whose diet is largely salt pork, corn bread and molasses. Persons who do not have enough fresh eggs, milk, meat and vegetables are especially liable to develop it.

In prisons, workhouses and insane asylums, this disease has appeared where no previous cases had existed, following a prolonged diet of cornbread, mush, corn fritters and coffee. Many of these cases have been cured by giving them fresh meat or sweet milk. Doctor Goldberger of the United States public health service, after long study of this disease, concluded that it was due to lack of fresh food.

While we don't know the cause, we do know that no person who drinks sweet milk every day, eats fresh meat two or three times a week and has plenty of fruits and vegetables, will have pellagra.

Bankrupt's Petition For Discharge

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE SOUTHERN DISTRICT OF OHIO. EASTERN DIVISION.

In the Matter of
Frank M. Dennis, Bankrupt
No. 4558 In Bankruptcy.

To the Honorable Judge of the District Court of the United States for the Southern District of Ohio.

Frank M. Dennis, of Monroe township in the county of Pickaway and state of Ohio, respectfully represents that on the 9th day of January last past, he was duly adjudged bankrupt under the Acts of Congress relating to bankruptcy; that he has duly surrendered all his property and rights of property, and has fully complied with all the requirements of said Acts and of the orders of the court touching his bankruptcy.

Wherefore he prays that he may be decreed by the court to have a full discharge from all debts provable against his estate under said Bankrupt Acts, except such debts as are excepted by law from such discharge.

Dated this 17th day of January, A. D. 1925

Frank M. Dennis, Bankrupt.
Barton Walters, Attorney.

Order of Notice Thereof.

Southern District of Ohio, ss.

On this 22nd day of January, A. D. 1925. On reading the foregoing petition, it is ordered by the court, that a hearing be had upon the same on the 10th day of April A. D. 1925, before said court, at Columbus in said District, at 10 o'clock in the forenoon; and that notice thereof be published in Union-Herald, a newspaper printed in said District, and that all known creditors and other persons in interest may appear at the same time and place and show cause, if any they have why the prayer of the said petitioner should not be granted.

And it is further ordered by the Court, that the clerk shall send by mail to all known creditors copies of said petition and this order, addressed to them at their places of residence as as stated.

Witness the Honorable Smith Hickenlooper Judge of said Court, and the seal thereof, at Columbus in said District, on the 22d day of January A. D., 1925.

The Hickle Vaporized Mineral Health Treatment.

There are the following features to the treatments aside from their extraordinary Medicinal and Curative Value.

Individual attention is given each and every case.

No extreme temperatures are experienced in the treatments.

There is absolutely no danger of taking cold as the lungs have not been heated, and the pores are all closed.

The root of the disease is attacked by driving off the poisonous acids that accumulate in the body.

The treatment complies in every detail with all the laws of Nature. Physician's directions in individual cases are faithfully and carefully carried out.

The Vaporized Mineral coming in contact with the relaxed body under the proper temperature, builds up the excretory tissues and eliminates the poisons (one of the major causes of the disease and pain)

This effects the greatest cleaning of the body of any known process and has brought perfect health to many chronic invalids and people suffering from

Gout, Lumbago, Stomach Disorders, Dropsy, La Grippe, Lung Affections, High Blood Pressure, Kidney Disease, Sciatia, Asthma, Neuritis, Catarrh, Worms Diabetis, Eczema, Hay Fever, Colds, Malaria, Liver Trouble, Nervousness, Piles.

Sunday Driving

They reached the city limits and pulled up at the side of the road opposite the first billboard. The man shut off his engine, lit his pipe and settled back comfortably in his seat, and his wife got out her sewing.

The friend who had been invited for the Sunday drive stood it for about ten minutes and then tapped the husband on the shoulder. "Say, what's the big idea?"

The man laughed and pointed to the billboard.

"We come out here every Sunday, old man, for a couple of hours. No use going any farther than the first billboard, because that's all you'll see, anyway, so we just stay here and take it easy! Saves gas, tires and dust and the strain of keeping from being crowded off the road!"—Judge.

Race of Boat Builders.

The Irish from time immemorial have been boat builders, although the west coast mackerel fishermen, or the hake coast to the south, or the haddock fisheries on the southeast must be visited to understand the real ingenuity of the Irish native boat builder. In a large way Belfast represents the high development of the shipbuilding industry.

Early Days of British Columbia.

The early chronicles of British Columbia offer nothing more stirring than the picture of the founding of Fort Victoria, now plain Victoria. One morning in the spring of 1843 the good ship Beaver, famous as the first steamer ever seen upon the Pacific, brought to the site the founding party of 15 men under James Douglas. It was to the Oregon boundary dispute, however, that Fort Victoria owed its actual foundation. When a settlement was arrived at in 1846 and the boundary was fixed in its present position, the Hudson's Bay company relinquished its hold on its post in the Oregon territory and retired to Fort Victoria. Anticipating the terms of the settlement, the company had constructed the fort three years before and this post now became the most southerly of those existing on the shores of the Pacific.

After Thirty-Four Years.

A Bath man has just received dividend checks from some shares of a silver mine which he bought 34 years ago and had forgotten all about. A friend who remembered the purchase told him of a notice in some paper that the mine was about to pay its first dividend and he began to cut coupons. —Grit
